1. Progress made thus far:

   - Build the essential structures of chrome extension.
   - Implementation of web crawler and indexer is partially completed.

2. Remaining tasks:

   - Finish the implementation of web crawler and indexer.
   - Implementation of the ranking function to sort the extracted emails based on a query from the user.
   - Software verification and debugging

3. Any challenges/issues being faced:

   - We are still working on ensuring 100% extraction of email addresses from the website.
   - In order to rank the emails, we need to label each email address. How to label them is a challenge during implementation.
   - Picking an effective ranking model to rank emails based on user's query.
